NetApp Contributing Code Upstream

NetApp storage models are built into the OpenStack community

- OpenStack Foundation
 - Charter Gold Member
 - Elected board representation
- 1st and leading storage provider
- Production deployments and deployer
- Community project leadership

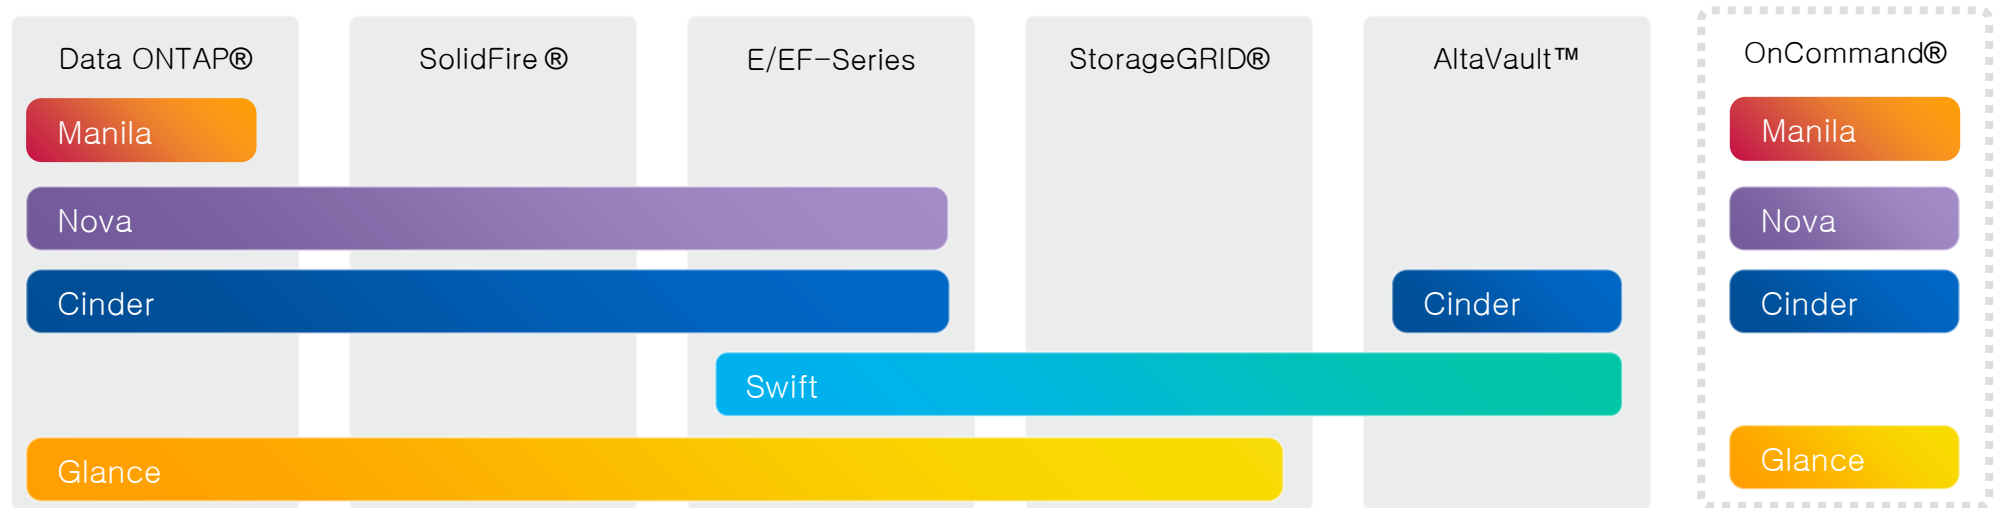

Giving Back to Open Stack Community

Cinder & Manila Lines of Code since OpenStack Inception

NetApp OpenStack Portfolio Enablement

OpenStack users consume NetApp through a common API framework

OpenStack support model

- NetApp Customer Support Operations supports (for SupportEdge Premium entitled systems):
 - NetApp Cinder unified driver
 - NetApp Manila unified driver
- OpenStack services are supported by distribution providers; NetApp partners with major vendors using TSANet where applicable

- Open OpenStack support cases through:
 - 1-888-NETAPP
 - mysupport.netapp.com

OpenStack on NetApp customer deployments

Container ecosystem integrations

Docker

First storage vendors to participate
Join the Docker Certification Program

Kubernetes

A charter member of CNCF
Member of the Storage Special Interest Group

Mesosphere

Launch partner for DCOS
Investigating reference architecture

Trident

Fully supported, open source container integration

Storage Orchestrator for Containers

- Broadest and most extensive production support for persistence through container platforms available today
- Enables self-service storage and data management through the native language of container platforms
- Model classes of service across heterogeneous platforms, aligned with the needs of developers as well as the business, delivered automatically and on-demand

NetApp Firsts

- First certified Docker volume plugin
- First external dynamic provisioner for Kubernetes; developed the model
- First clone capabilities through Docker and Kubernetes
- ... more to come!

NetApp and Containers

Your Data: Persistent, Protected, at Scale

Dynamic Storage Provisioning and Orchestration

Proven tools to deliver and manage persistent storage for any application, in any location.

Accelerate DevOps

Maintain visibility and awareness of developer activity, enabling operations to do more than provision storage

Deliver Agility with Data Insights and Control

Support developer activity AND deliver flexibility to manage and move data
